Microsoft releases key innovations as open source for others to use and build upon

Microsoft open sources powerful developer tools—VS Code is the #1 most popular editor for developers in **any language**

Microsoft creates new open source languages. R, TypeScript, and PowerShell are all top ranked open source languages with origins linked to Microsoft

Azure open sources key cloud infrastructure components. Service Fabric and acs-engine released as open source

Microsoft is a leading Linux innovator, ranked as a top contributor to the Linux Kernel

“ I know it's very, very hard for some of you to believe it, but **Microsoft really and truly is well on its way to becoming an open-source company.**”

Why Microsoft is turning into an open source company

Microsoft contributes code and thought leadership to open source communities, engaging developers as developers

Microsoft has more engineers developing in the open on Github than AWS, with about 5,000 Microsoft employees committing to opens source projects making more than 2 million commits

Microsoft employees commit to other people's projects contributing code to more than 8,000 non-Microsoft projects

Microsoft collaborates on open source development with other organizations via foundations like the .NET Foundation, Linux Foundation, CNCF, and more

Microsoft builds communities; more than 19,000 developers from over 3,700 companies have contributed to .NET Core and related open source repositories

“ Today [Microsoft] is **demonstrating some impressive traction when it comes to open source community contributions**. If we are to judge the company on its recent actions, **the data shows** what Satya Nadella said in his announcement about **Microsoft being “all in on open source” is more than just words.**”

The data behind Microsoft's surprising open source track record

Azure enables every developer and organization to more easily adopt open source in the cloud, without having to be an expert

Azure makes open source projects easier to use by improving their security and manageability, while preserving open APIs.

Kubernetes, MySQL, Postgres, Redis Cache, Spark and more, all as native managed Azure services with full open API compatibility and integrations with Azure security and monitoring

Azure provides enterprise support, and a large partner ecosystem. From embedded ISV support partners like Red Hat, to implementation partners, the Azure ecosystem can provide whatever help you need

“ As the transformation to a Cloud-first organization took hold at Microsoft, the commitment to open source really took hold....**open-source toolsets really find first-class citizenship within the Azure platform.**”

10th Magnitude, Azure Partner of the Year, 2018
