

Erasmus Without Paper Network from development to production

Janina Mincer-Daszkiewicz – University of Warsaw

EUNIS 2019

Co-funded by the
Erasmus+ Programme
of the European Union

erasmuswithoutpaper.eu

Agenda

- Erasmus Without Paper Project 2.0.
- Launching the EWP Network.
- What is the EWP Network?
- How to build the EWP node and get connected?
- What are possible user scenarios?
- Connecting to Mobility Tool+.
- Competence Center.
- What going into production means?

Online DEMO, if time allows

Erasmus Without Paper Project 2.0

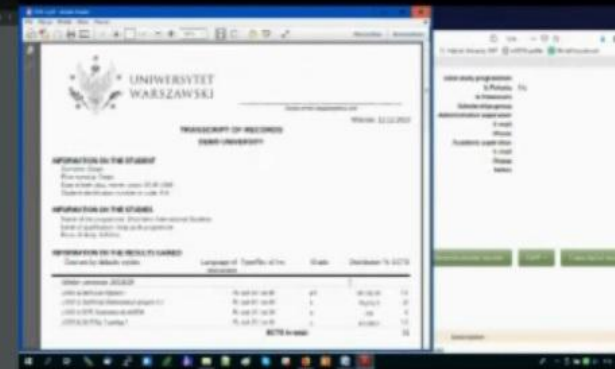

- Funded by the Erasmus+ Programme, Key Action 3, years 2018-2019.
- Basing on the results of EWP 1.0, aims at building the sustainable infrastructure for digitized exchange of mobility data.
- Various pieces of the puzzle:
 - The EWP Network.
 - Connectors for SISs developed at home, by national consortia, by commercial providers.
 - Competence Center to help with dissemination and development.
 - Dashboard with IIA editor, OLA etc. for the others.
 - Open Source University Alliance to share code.

Official launch of the EWP Network

- Took place at the launch conference in Ghent, December 2018.
- More than 350 participants from across Europe.
- Live DEMO by teams representing:
 - SOP (Austria),
 - QS Unisolution (Germany),
 - SIGMA (Spain),
 - MUCI (Poland),
 - University of Ghent (Belgium),
 - University of Porto (Portugal)
- <https://www.erasmuswithoutpaper.eu/launch-conference>

Transcript of Records sent live from the University of Warsaw to Porto University

Erasmus Without Paper conference 12.12.18

What is the EWP Network?

Design

- Network architecture, protocols, services etc. fully described in **GitHub** which is **publicly** available repository of source code:
 - **ReadMe** part – high level description in „common” language.
 - **Flowcharts** explaining the mobility process – for „business” oriented people.
 - **XML, XSD files** – for technical staff.
- Available at: <https://github.com/erasmus-without-paper/>

Erasmus Without Paper

A common space for all EWP-related Git projects.

What is the EWP Network?

Registry

- Address book which gathers in one place information about:
 - **who** – is connected,
 - **where** – how to find him,
 - **what** – services are offered.
- Registry is updated automatically.
- Available at:
 - PROD: <https://registry.erasmuswithoutpaper.eu/>
 - DEV: <https://dev-registry.erasmuswithoutpaper.eu/>
- Eventually PROD registry will have a couple of instances synchronized in real time (SLA, HA).

erasmus without paper **EWP Registry Service**

*Automated discovery service of APIs related to Higher Education in Europe
Provided and supported by Erasmus Without Paper project*

At the following URL you will find the XML catalogue which describes all the institutions and APIs exposed by them:

<https://registry.erasmuswithoutpaper.eu/catalogue-v1.xml>

This catalogue is continuously refreshed. Read the [Architecture](#) document for more information. Also check out the [Developers Hub](#) for useful tools and documents.

What is the EWP Network?

Connector (EWP server)

- Piece of software which is a SIS's **agent** in the EWP Network.
- Has to implement:
 - Security transport protocols (**ECHO**).
 - **Discovery** service (**Manifest** file).
- May implement some **business oriented** APIs.
- Exposed to the public by **URL** available in the Registry.
- One **EWP node** can host more than one HEI (recognized by domain names=SCHAC codes).

Discovery API (Manifest file)

DEV Registry Service

What is the EWP Network?

- **APIs** (*Application Programming Interfaces*) — a set of clearly defined methods of communication between various software components used to build applications.
- There are many APIs supporting the **EWP business model**:
 - **Primary Network** APIs (Discovery Manifest, Echo, Registry).
 - **General Purpose** APIs (Institutions, Organizational Units, Courses).
 - **Erasmus Mobility** APIs (Interinstitutional Agreements, Outgoing Mobilities, Incoming Mobilities, Nominations Approval, Mobility Arrival and Departure, Transcripts of Records, CNRs).
 - **MT+** APIs (Institutions, Projects, Dictionaries).
- Each API is relatively simple and can be implemented separately from the others.
- APIs may be implemented one by one, gradually building support for the whole process.
- There are APIs for **sending** (pushing) data and for **requesting** (pulling) data in response to **change notifications** (CNR). It is possible to handle EWP data exchange **automatically** by subscribing to notifications and firing triggers when they come.

What is the EWP Network?

EWP Client

- EWP functionalities spread over the **User Interface** of the Mobility module used by IRO.
- The most **business oriented** part of the project.
- Should be designed with close contact with the **business owner** (mostly IRO staff).
- May (will) change in time from less to more automated.

International cooperation > Arrival Nominations

How to build EWP node and get connected?

- Implement the **EWP connector** with ECHO and Discovery (or take it from OSUA).
- Send URL to the Registry administrator (usos@usos.edu.pl).
- Start testing.
- Implement other APIs as agreed with local users.
- Update your manifest file as new APIs become available.
- Test, test, test (using automated tests, reference connector, demo installations of the partners, or you own).

How to build EWP node and get connected?

In the meantime:

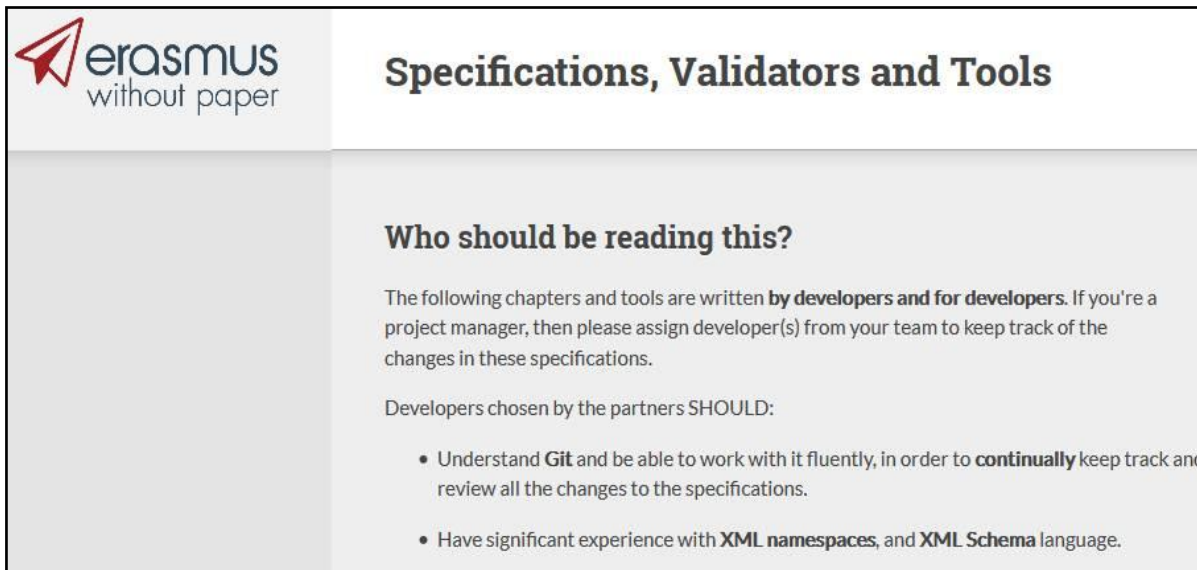

- Design the **EWP client** with your business clients.
- Search for inspiration looking at installations of the partners.
- Integrate EWP services into your local processes.
- Test, test, test in DEMO EWP Network.
- Go to production.

The image displays several screenshots from the MoveON EWP system interface:

- Top Right:** A window titled "New EWP Notifications" showing a table with columns for No., Date, Entity name, Gender, Warning, and Verified. It includes a "Send" button and a warning message: "Clicking the 'Send' button will send decisions on the following nominations."
- Middle Right:** A dashboard for "External institution: Universität Bremen" showing "EWP Organizational Units" with a list of units like "EM-LogDynamics", "EMBC - Marine Biologie", "FB01 Physics, Electrical Engineering", etc.
- Bottom Left:** A "Connect" page showing a list of institutions under "Institutions - (19 Entries found)".
- Bottom Center:** A detailed view of an institution (Warsaw University of Technology) with fields for Code, Name, Address, and Contact information.
- Bottom Right:** A "User notifications" panel with a list of messages and "Check Mobility" buttons.

How to get help on a technical level?

- Developers Guide: <https://developers.erasmuswithoutpaper.eu/>
- Self testing: API Validator.
- Self testing: XML Validator.

 **Specifications, Validators and Tools**

Who should be reading this?

The following chapters and tools are written **by developers and for developers**. If you're a project manager, then please assign developer(s) from your team to keep track of the changes in these specifications.

Developers chosen by the partners SHOULD:

- Understand **Git** and be able to work with it fluently, in order to **continually** keep track and review all the changes to the specifications.
- Have significant experience with **XML namespaces**, and **XML Schema** language.

XML Schema Validator

This tool will help you with writing EWP XML documents. For example, you can paste the contents of your [Manifest file](#) here before you upload it onto your production site. You should be able to validate any XML document described in all **RELEASED**, **DEPRECATED** and **OBSOLETE** specifications listed on [Developers Hub](#) website (plus, perhaps, some of the **DRAFT** ones).

Note, that this tool will validate **against the schema only!** Even if such validation succeeds, your file **may still be invalid** (if, for example, you didn't adhere to the guidelines described in `<xs:documentation>` elements included in the XSD files).

Paste your XML document below and press

```
<ounits-response
  xmlns="https://github.com/erasmus-without-paper/ewp-specs-api-ounits/tree/stable-v2"
  xmlns:ns2="https://github.com/erasmus-without-paper/ewp-specs-types-address/tree/stable-v1"

The screenshot shows the GitHub profile for 'Erasmus Without Paper'. The profile name is 'Erasmus Without Paper' with a red paper airplane icon. Below the name is the description 'A common space for all EWP-related Git projects.' and contact information: 'http://developers.erasmuswithoutpaper.eu/' and 'usos@usos.edu.pl'. The profile statistics are: 58 Repositories, 29 People, 5 Teams, and 0 Projects. Under 'Pinned repositories', there are two items: 'ewp-specs-management' with a description 'Working with EWP Technical Documentation' document, 1 star, and 3 forks; and 'general-issues' with a description 'An empty project for tracking issues not related to any specific project.' and 1 fork. At the bottom, there is a search bar for repositories and a filter dropdown set to 'Type: All'.

GitHub Mobility process explained on flowcharts

Mobility Tool+ Institutions API

- [What is the status of this document?](#)
- [See the index of all other EWP Specifications](#)

Summary

This document describes the **Mobility Tool+ Institutions API**. It is assumed that this API is implemented by only one host managed by the Directorate-General Education and Culture Unit (DG EAC) of the European Commission. However, the specification itself does not limit the number of hosts.

Once implemented by the host, it allows external clients to retrieve general information on institutions known by this host.

Request method

- Requests MUST be made with either HTTP GET or HTTP POST method. Servers MUST support both these methods. Servers SHOULD reject all other request methods.
- Clients are advised to use POST when passing large number of parameters (servers MAY set a limit on the string length).

Request parameters

Parameters MUST be provided in the regular `application/x-www-form-urlencoded` format.

pic (repeatable, required)

A list of institution PICs the client wants to retrieve information on (no more than `<max-ids>` items).

This parameter is *repeatable*, so the request MAY contain multiple occurrences of it. The server is REQUIRED to parse them.

Server implementers provide their own chosen value of `<max-ids>` via their manifest entry (see [manifest-entry](#)). Servers SHOULD parse this value (or assume it is equal to `1`).

Clients may retrieve proper PICs from other EWP APIs (most often, the [Registry Service](#)).

eche_at_date (required)

A date in the `YYYY-MM-DD` format. The Erasmus Charter for Higher Education (ECHE) accreditation included in the response should be the one valid at this date.

DEMO installations to test mobility scenarios

- Two installations:
 - University of Warsaw at <https://usosadm.demo.usos.edu.pl/usosadm/>
 - Some other HEI at <https://usosadm-hei.demo.usos.edu.pl/usosadm/>

Scenarios and APIs

- Sharing institutional details, contacts, organizational units and factsheets.
- Negotiating inter-institutional agreements.
- Exposing course catalog.
- Sharing nominations, approval/rejection, changes.
- Learning agreements – all parts (before, during, after the mobility).
- Confirmation of the arrival and departure dates → grants.
- Digitally signed Transcript of Records with grade distributions (XML and PDF).

MT+ Projects API

The screenshot displays the MT+ Projects API interface. A modal dialog box titled "Get data from EWP" is open, showing the following information:

- Call year:** 2015 (indicated as a required field with an asterisk)
- Project ID:** 2015-1-PL01-KA104-000181
- Start:** 01.07.2015
- End:** 01.07.2016
- Action type:** KA104

The dialog also shows a second set of identical information below the first. At the bottom of the dialog, there are buttons for "Get data from EWP" and "Close". A legend indicates that an asterisk (*) denotes required fields.

The background interface shows a list of institutions, with "Uniwersytet Warszawski" selected. The top right corner indicates the user is logged in as "LOGIN1 (Role: PELNA)".

Erasmus Mobility Coordinators

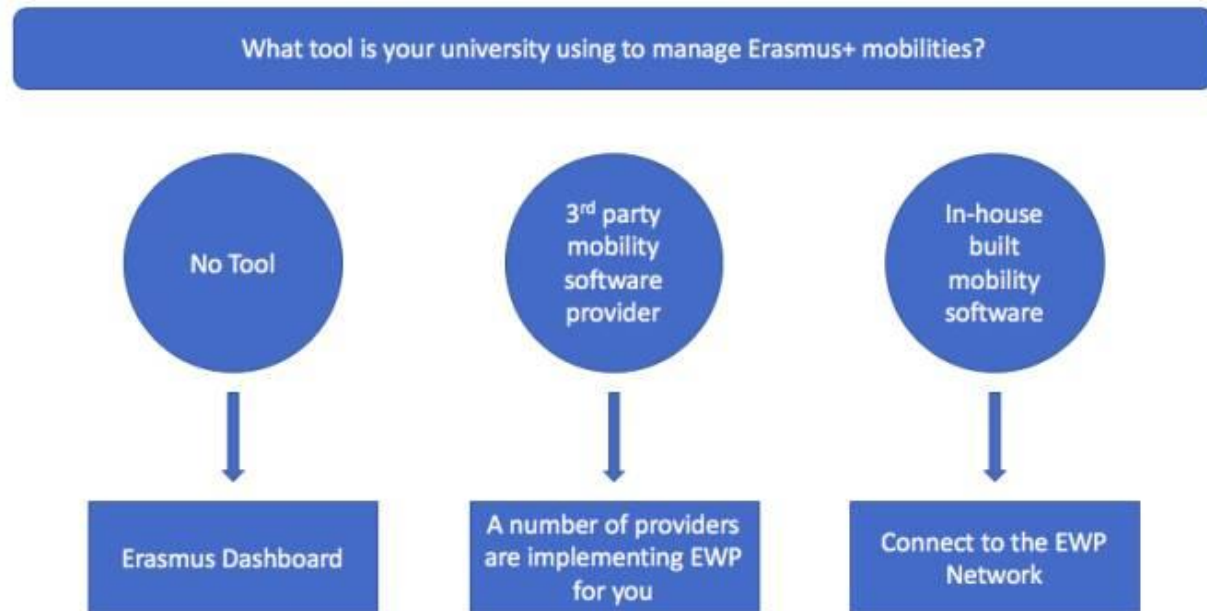

Utworzone przez Stefan Jahnke, ostatnia modyfikacja 27 maj 2019

Erasmus Without Paper allows your Higher Education Institution (HEI) to digitalise Erasmus+ mobility management processes.

Depending on the way your currently manage Erasmus+ mobilities at your institution, this page will offer an overview of the different scenarios

- 1. No Tool? Use the Erasmus Dashboard.
- 2. In-house built mobility management software? Connect to the EWP Network.
- 3. Use of 3rd party mobility management software? They will connect to EWP.

The following picture gives an overview of the different options. On this site you will find information and tools for all three scenarios.

Further development plans

- Designing MT+ API for reporting mobilities – *work in progress*.
 - Authorisation of end users.
 - Draft mobilities, final mobilities.
- Connecting Dashboard (with OLA and IIA editor) to the EWP Network – *work in progress*.
- Fine tuning and extending existing APIs (e.g. automatic Egracons grade conversion) – *work in progress*.
- Automatic tests for all APIs – *work in progress*.

What going into production means?

- Industrializing the EWP Network and its elements.
- Integrating various elements of the EWP ecosystem.
- Increasing network coverage by accepting new institutions.
- Supporting new partners in joining the network, on a political, organizational and technical level.
- Integrating data transfer with business processes of student mobility carried at higher education institutions.
- Integrating services offered by other networks into one digital platform for education sector.
